EXPERIMENT 5

ROLL NO:240701801 **NAME:DHARSHAN D**

Task Analysis

Task Analysis is the process of breaking down a user's interaction with a system into smaller steps to understand how the user completes a goal. It helps in improving usability and identifying possible issues in the application.

In this experiment, Task Analysis is applied to a **Food Delivery Application** to understand how users order food from browsing to delivery tracking.

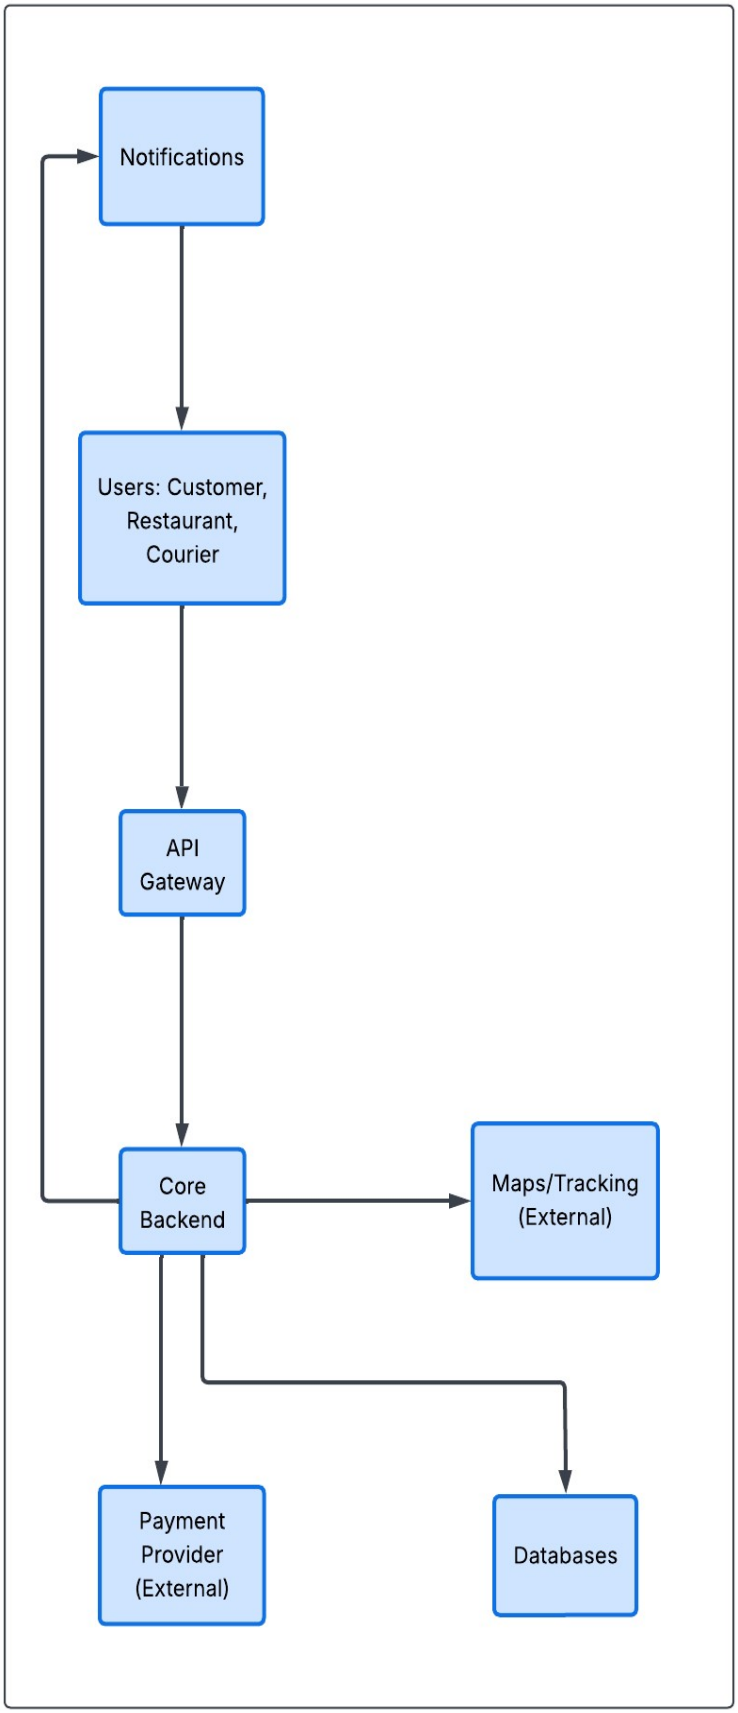
User Flow

User Flow is a visual representation of the steps a user follows to complete a task inside an application. It shows navigation paths, decision points, and different possible outcomes.

User Flow for Food Delivery Application

Start → Open App → Login / Register → Browse Restaurants → Search / Filter → Select Restaurant → View Menu → Select Items → Customize Items → Add to Cart → Open Cart → Review Cart → Proceed to Checkout → Enter Delivery Address → Choose Delivery Time → Apply Promo Code → Select Payment Method → Make Payment → Payment Confirmation → Place Order → Order Confirmation → Track Order → End

Food Delivery App (Simple)



Step 1: Start

• The user opens the Food Delivery application.

Step 2: Login / Sign Up

• If the user is already registered, they log in.
• If not, they create a new account using the Register option.

Step 3: Browse Restaurants

• The system displays nearby restaurants.
• The user can browse or search for specific food items.

Step 4: Select Restaurant

• The user selects a restaurant to view its menu.

Step 5: View Menu and Select Items

• The menu is displayed.
• The user selects food items and customizes them if needed.

Step 6: Add to Cart

• Selected items are added to the cart.
• The user can review items before proceeding.

Step 7: Proceed to Checkout

• The user clicks on Proceed to Checkout.
• If not ready, they can go back to modify the cart.

Step 8: Enter Delivery Details

• The user enters the delivery address.
• The user selects delivery time (ASAP or Schedule).
• Promo codes can be applied if available.

Step 9: Payment Method

• The user chooses between Online Payment or Cash on Delivery (COD).
• If Online Payment is selected, payment is processed and confirmed.

Step 10: Place Order

• After successful payment or COD selection, the order is placed.
• Order confirmation message is displayed.

Step 11: Track Order

• The user can track the order status (Preparing → Out for Delivery → Delivered).

Step 12: End

• The ordering process is completed.
• The user can close the app or place another order.
